# **1. Introduction**

The purpose of this document is to provide the specifications and guidelines for the Import and Export functionality of the DARMHA (Data Assessment Registry Mental Health & Addiction) system. The Import functionality provides a method for DARMHA users to submit data to the DARMHA system through the use of comma delimited text files containing predefined layout information. The Export functionality provides a method for DARMHA users to export data from DARMHA.

## **1.1 Scope**

This document provides information about DARMHA Import and Export Functionality. This document is technical in nature and covers the following topics:

- Importing of Data
  - Datasets that are requested from the providers and their respective data elements, both required and optional
  - File layouts needed for the different datasets that will be imported into the DARMHA
  - Error Reports with error definitions and the effects on the imports
- Exporting of Data
  - Data set available with each export

Topics that are not covered in this document include:

- How to set up your application to utilize the DARMHA Import or Export functionality

## **Export Functionality**

The DARMHA system provides the functionality to extract data out of the system in real-time without supplying a formal request to DMHA. This functionality will facilitate the data integration efforts to the provider's Electronic Medical Records or other Case Management systems.

## **1.2 Export Types**

Data can be exported as text (comma delimited) or XML. When exporting to a text file, the first line lists all of the column names. Currently there are nine different export types available in DARMHA. For each export type, except Assessment Tools, there are four options:

- By Date – Supply a Date Range. This will export all the data between the date(s) entered.
- All new records not previously exported
- Everything in Open Episodes
- Everything: It will export all the data

Export Type	Description
Consumer Demographics Export	This is a data extract of the consumer demographic information.
Assessment/ Results Export	This is a data extract of the consumer assessment information by either Summary Assessment Info (resulting algorithm recommendations) or by Detail Assessment Info (the corresponding answers to each of the items/questions).
Episode Information Export	This is a data extract of consumer Episode information.
Encounter Information Export	This is a data extract of consumer Encounter information.
NOMS Data Export	This is a data extract of consumer NOMS information.
Diagnosis Data Export	This is a data extract of Diagnosis information.
EPB Data Export	This is a data extract of EBP information.
Agreement Funding History Export	This is a data extract Agreement Funding information.
Assessment Tools	This provides all assessment questions and answers.

### 1.3 Export Access

The export functionality is available only to DARMHA users that have been authorized by their organization to have access to this functionality. Users that have this functionality activated will have available a menu named Import Export and two submenus (Export and Export log). On the Export submenu, users will be able to select the data needed to be exported as well as the format the data will be exported. The data will then be available on the Export Log page. For more information details regarding field options, see the import section.

## 2. Import Functionality

The goal of the Import functionality in DARMHA is to provide users with a method to submit their data to the DARMHA system by utilizing comma-delimited text files. There are 3 data types (consumer, assessment and episode) available. The following table shows the layouts available within each data type.

Data Type	Import Layout Name	Record Identifier	Description
Consumer	Consumer		Insert/Update Consumer demographic
Assessment	Assessment		Insert Consumer assessment information.
Episode	Episode	E	Insert/Update Consumer Episode information.
Episode	Encounter	S	Insert New Consumer Encounter.
Episode	Encounter	U	Edit Existing Consumer Encounter.
Episode	Delete Encounter	X	Delete Existing Consumer Encounter.
Episode	NOMS	N	Insert Consumer NOMS information.
Episode	Diagnosis & Agreement Type	D	Insert Consumer Diagnosis information.
Episode	EBP	P	Insert Consumer EBP information.

### 2.1 Import Access and Requirements

The Import functionality of DARMHA available to DMHA contracted providers allows them to import data into the DARMHA system. The DARMHA Import functionality validates and processes data at the point of delivery to the system.

To utilize the Import Functionality, DMHA Contracted Providers are required to supply through the DARMHA Help Desk ([darmha@fssa.in.gov](mailto:darmha@fssa.in.gov)) at least one user to be assigned a DARMHA login for data submission and retrieval. More accounts may be created at the provider's discretion.

Providers are required submit test data to the DARMHA Quality Assurance (QA) environment (<https://dmhaqa.fssa.in.gov/DARMHAQA>). This allows providers the opportunity to review and refine their process without the risk of corrupting live data. For data security reasons, all data submitted to the DARMHA QA environment must be test data only. Before being given access to import in DARMHA Production, providers are required to perform a minimum of two (2) error-free submissions of each import area (Consumer, Episode, Assessment, Diagnosis/Agreement Type, Encounter, EBP, and NOMS) they intend to use to submit data. Once the providers have successfully performed their testing in the DARMHA QA environment, the provider can request to the DARMHA Help Desk their production access to the Import functionality. After approval, access will be granted to the assigned users for production data submission.

The following requirements apply for DARMHA Import.

- Only comma-delimited text files are accepted. Do not include a header row in the import file. The field names displayed in the import layouts are for reference only and should not be included in the text file.
- If records are rejected, after correcting the error, resubmit only the records with errors.
- Optional fields that contain no data must have a placeholder in the comma-separated file in order for the application to parse the data successfully.

- The Consumer Import needs to be done first followed by the “E” Episode Import. The order of the rest of the imports is not important.
- String Fields can include commas if field is encapsulated with double quotes.
- Required Identifiers
  - Providers need to create a unique identifier for consumers called the **“Internal ID.”**  
**Internal IDs are required in every import.**
  - Providers need to create an identifier for episodes called the **“Internal Episode Code.”** This is the provider's identifier for a specific episode in a consumer's history and allows the provider to edit both current and past episodes. The Internal Episode Code must be unique for the specific consumer, but does not have to be unique across the provider. This means that Consumer A can have an Internal Episode Code of “1” and Consumer B can have an Internal Episode Code of “1”, but Consumer A cannot have two Internal Episode Codes of “1.” **Internal Episode Code's are required in every import, except the Consumer Import.**
  - Providers need to create an identifier for encounters/services called **“Internal Service ID”** if they want to edit or delete encounters through Import. This ID identifies a specific encounter/service for future edits or deletion. The Internal Service ID must be unique for the specific consumer, but does not have to be unique across the provider. This means that Consumer A can have an Internal Service ID of “123” and Consumer B can have an Internal Service ID of “123”, but Consumer A cannot have two Internal Service IDs of “123.”
  - Providers can choose whether they want to create an **“Internal Assessment ID.”** This is not a required identifier.

## 2.3 Episode Data

The Episode Data contains all of the detail data that determine the consumer's episode of care. The file is a variable length, variable field, comma-delimited data set. Each row of data will be tagged with a leading attribute, the Record Identifier that indicates which record set the row belongs to. Providers can submit all Episode data in the same file or in separate files.

Note: It is easier to troubleshoot import issues if one type of Episode data is sent at a time. For example, importing only NOMS data in a file.

Note: The Episode Data will be processed in the order received within the file. Detail data may not be submitted for areas such as the Assessment, Encounter, Diagnosis, NOMS, EBP or Agreement/Funding data sets without a previously submitted Episode ("E" Import) for the consumer.

- There is no corresponding Internal Episode Code for the consumer.
- Required fields are missing.
- Date fields are not formatted correctly.

- Non-required fields require an empty field place holder ( , )

## Assessment Import Layout Requirements

- The “Internal ID” value must match an existing consumer submitted prior to the submission of the assessment
- The “Certified CANS/ANSA Professional ID” value (also called “Clinician ID”) must be registered with a certified individual within the DARMHA system prior to the submission of the assessment. The information is currently supplied to the DARMHA by contacting the DARMHA support center and registering the users
- The “Assessment Date” must be prior to the expiration date of the CANS/ANSA clinician’s certification. Future dates are not allowed
- The “Answer ID” field must coincide with the IDs supplied by DMHA and the DARMHA system for the CANS/ANSA tools. This ensures consistent data and valid algorithm recommendations
- The “Internal Episode Code” specifies which episode of care to attach this assessment to.

When generating a crosswalk or integrating the CANS/ANSA tools into your application the following items need to be considered:

- All answers submitted must correspond to the same assessment tool. Several tools have similar questions/modules and answers; however, each answer has its own unique identifier. Substitution of an “Answer ID” from another tool/module/question results in the rejection of the assessment
- All assessments must be submitted as complete assessments. No modifications of an assessment can be made after it is submitted via the import process. If an assessment is partially complete, enter it in through the web interface and return to it later to complete it.
- All assessments have core modules and possibly an extension module triggered by answers to specific questions within a core module. When an assessment is submitted, all core modules are required to have a valid answer or else the import process rejects the assessment. Extension modules are evaluated based upon the answers supplied in the respective core modules.
- Some modules currently have “Not Applicable” available as an answer option. In these modules, the “NA” value is required for each question within the module for it to apply to the whole module. Failure to do so will result in an incomplete assessment. Incomplete assessments are rejected.

## Import Errors Troubleshooting

The goal of the following sections is to provide a description of some of the information provided for each record processed using the import functionality. If after reviewing these items the user still can't identify the cause of an error, the user should contact the DARMHA Helpdesk ([darmha@fssa.in.gov](mailto:darmha@fssa.in.gov)) for further assistance.

### Message ID

The Message ID column of the Import Log Detail grid report displays the resulted DARMHA Message Code number for the processed transaction (record). A complete list of all the DARMHA Message Codes and their descriptions are available Section 4 at the end of the document.

### Reference ID

The Reference ID column of the Import Log Detail grid report provides further information for the processed transaction (record). The reference ID may contain one of the following values:

- DARMHA Message Code
- Binary (0 or 1) string representing the status of each field (0 = ok or 1 = error)
- Text message
- Reference value (Internal ID, Episode ID, Date, etc)

### Binary String (0100000...)

The binary string found in some Reference ID records represents the status of each field for the record layout being imported. For example, an error on the Date of Birth while inserting or updating a consumer record will display an error on the position # 6 (000001000000000000).
